The light-duty vehicle fleet is expected to undergo substantial technological changes

over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. *Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

A Globe and Mail bestseller! • “Dr. Phil,” Canada’s best-known automotive expert, and George Iny walk you through another year of car buying. After almost fifty years and two million copies sold, Phil Edmonston has a co-pilot for the Lemon-Aid Guide — George Iny, along with the editors of the Automobile Protection Association. The 2018 Lemon-Aid features comprehensive reviews of the best and worst vehicles sold since 2007. You’ll find tips on the “art of complaining” to resolve your vehicular woes and strategies to ensure you don’t get squeezed in the dealer’s business office after you’ve agreed on a price and let your guard down. And to make sure you receive compensation where it’s due, Lemon-Aid’s unique secret warranties round-up covers manufacturer extended warranties for performance defects. Lemon-Aid is an essential guide for

careful buyers and long-time gearheads (who may not know as much as they think).

From fixing a flat tire to changing the oil, a guide to home car care provides easy-to-follow instructions for monitoring brakes, checking fluids, adjusting headlights, troubleshooting major problems, and other tasks.

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos

than ever.

Nachdem die Erforschung der Wortbildungsregularitäten des Deutschen in den zentralen Bereichen zu erheblichen Fortschritten und weithin konsensfähigen Ergebnissen geführt hat, wendet sich die Forschung in den letzten Jahren verstärkt neuen Aspekten zu, wobei textlinguistische und in verschiedener Weise anwendungsorientierte Fragen eine erhebliche Rolle spielen, daneben aber auch andere, häufig theoriespezifischere Herangehensweisen gewählt werden. Wie viele andere Bereiche der Sprachwissenschaft hat sich auch die Wortbildungsforschung mit der neuen Möglichkeit auseinanderzusetzen, elektronische Korpora als empirische Basis zu nutzen. Der Band dokumentiert die Ergebnisse der Tagung zur Wortbildung an der Universität Santiago de Compostela im Sommer 2006, und gerade bei einer transnationalen - und im Gefolge auch germanistisch-hispanistisch transdisziplinären - Tagung liegt es nahe, die typologisch vergleichenden Aspekte zu betonen, die ebenfalls in letzter Zeit erheblich an Bedeutung gewonnen haben. Mit der Schwerpunktsetzung auf den (deutsch-spanischen) Vergleich, auf textuelle und auf am Bereich DaF anwendungsorientierte Fragestellungen ergänzen die im vorliegenden Band dokumentierten Ergebnisse dieser Tagung die derzeit wieder recht lebhaft diskutierte Diskussion um Fragen der Wortbildung.

Thinking that the solutions to our environmental woes have to start in our own backyards, the editors of uTOpia: Towards a New Toronto and The State of the Arts: Living with Culture in Toronto asked twenty prominent Torontonians for immodest proposals for greening their city. Their answers--some playful, some pragmatic, some pie-in-the-sky--offer brazen new perspectives on transportation, garbage, trees, water, and green space and arrive at imaginative and ingenious solutions to the problems plaguing modern cities.
