Embrace the thundering horsepower of Firebird, Pontiac's number one performance car, in this full-color reference featuring comprehensive coverage of every Firebird built from 1967 to 2002. Owners and fans will enjoy tracking the evolution through hundreds of color photos while learning about their favorite models. More than 725 model and price listings provide vehicle descriptions, serial number explanations, original price and weight charts, equipment and available production data, engine details, historical facts, VIN information, and collector values for 1967 to 1995 models. The pricing section uses the Old Cars Price Guide's 1-to-6-price condition rating scale. All Firebird models are covered, including base Firebird, Firebird 326, Formula Firebird, Firebird 400, Ram Air 400, Esprit, Trans-Am, and SLP Bandit, Firehawk series, and more.

Guide to maintenance and repair of every mass produced American car made between 1976 and 1983.

The naturalist frequently finds that to learn to identify species is a most difficult task, and yet nothing is more important to his work. He finds that species are not separated merely on shape and colour, but on structural peculiarities which frequently are connected with particular habits. This is especially the case in vertebrate animals, which in Great Britain, with its very limited number of forms, may be identified in a haphazard manner by elimination. This is impossible in a country where different climatic areas interdigitate and where there are many species, as the United States, which for the purpose of the naturalist is a continent. Here Prof. H. S. Pratt fills the bill by his 'Vertebrate Animals of the United States,' which, however, omits birds. A short account of each group is given, the anatomical features dividing it up into sub-groups and families being usually illustrated. Where necessary, special features for families are described and then follow keys to the genera, descriptions of the same and keys to their species. The whole closes with a good bibliography and a glossary of technical terms. The short descriptions of each species, with mention of their geographical distributions and habitats, are excellent, and the tabulation of the sub-species most useful. We learn that there are about 600 species of freshwater fishes, 70 of newts and 61 of frogs and toads we are given a key by which their tadpoles and eggs can be identified-300 reptiles and a wide series of mammals belonging to 9 orders. We characterise this publication as a book for ready reference, such as should be on the shelves of all American naturalists.

The year 2007 marked the bicentenary of the Act abolishing British participation in the slave trade. Representing Enslavement and Abolition on Museums- which uniquely draws together contributions from academic commentators, museum professionals, community activists and artists who had an involvement with the bicentenary - reflects on the complexity and difficulty of museums' experiences in presenting and interpreting the histories of slavery and abolition, and places these experiences in the broader context of debates over the bicentenary's significance and the lessons to be learnt from it. The history of Britain's role in transatlantic slavery officially become part of the National Curriculum in the UK in 2009; with the bicentenary of 2007, this marks the start of increasing public engagement with what has largely been a 'hidden' history. The book aims to not only critically review and assess the impact of the bicentenary, but also to identify practical issues that public historians, consultants, museum practitioners, heritage professionals and policy makers can draw upon in developing responses, both to the increasing recognition of Britain's history of African enslavement and controversial and traumatic histories more generally.
