SAP BusinessObjects Dashboards is a leading Business Intelligence and reporting tool that provides you with a real-time understanding of your business with agile visualizations. Starting with an introduction to Dashboards and its benefits, the book slowly moves on to explain the dashboard creation process. After this, you will learn how to add charts, single-value components, maps, selectors, and other third-party plugins to the existing dashboards. Furthermore, it shares many best practices and will also help you to connect your dashboard to real data by establishing a data connection to a data source. You can also explore more about mobile BI and learn how to create dashboards for mobile devices. By the end of the book, you will be able to prepare, plan, and design interactive dashboards based on your business requirements using this cutting-edge BI tool.

This guide to SAP BusinessObjects Dashboards 4.0 (formerly Xcelsius )is a cookbook packed full of practical recipes written in a clear, concise manner with annotated examples to empower readers to quickly accomplish specific dashboard tasks. If you are a developer with a good command and knowledge of creating dashboards, but are not yet an advanced Dashboard Design user, then this is the perfect book for you. You should have a good working knowledge of Microsoft Excel as well as knowledge of basic dashboard practices, though experience of Dashboard Design as a specific dashboard tool is not essential.

When SAP acquired Business Objects in 2008 Crystal Reports became a standard part of SAP's software and menu of reporting tools. This book written specifically for business users provides an introduction to SAP Crystal

In this project, MS-Access is used as the database for creating and modifying tables. SAP (Systems, Applications and Products in Data Processing) Business Objects (BO) is used to create universe (views) by joining the tables using SQL. New fields or newly calculated variables can also be created in BO. SAP Query as Web Source is used to connect SAP-BO and an Xcelsius tool (also called SAP dashboard tool) generates a web link and is used in SAP Dashboard for mapping. The SAP dashboard software tool helps in designing the dashboard and a desired layout with selected fields can be produced as output. Thus data is transformed into graphical representations. Graphs are linked to tabs for tab level reporting. So when the user clicks on a particular

tab, the related graphs are displayed on the dashboard. The user can take decisions either by using what-if analysis, drill-down graphs or by modifying the database. Hence the name Real-time and Interactive analysis of Database query reports (RID). The views are formed only once but the database can be changed and the corresponding updated reports can be viewed any number of times. Thus the SAP dashboard design helps in creating stunning visualizations and interactive dashboards from the Microsoft Access database. The graphs provide optimal decision making and excellent ERP (Enterprise Resource Planning).
