Everyone hates exams. And there's nothing worse than staring blankly at an exam paper knowing you can't answer the question! John Croucher has uncovered excuses and cheating techniques used by students around the world to avoid exams, to assist their memories or to explain poor marks. From underwear inspections to student riots, this is a collection of outrageous and often surprising stories. Exam Scams is hilarious reading for every student who has sat an exam and for every lecturer who has marked an exam paper.

Educational Assessment in a Time of Reform provides background information on large-scale examination systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough. If not, then how can it be improved? The aim of this book is to provide a point of departure for discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation.

It is increasingly recognised that the medical education curriculum should re-integrate basic sciences and clinical disciplines. This would enhance students' ability to integrate previous and future learning, link theory and professional standards to practice, and adapt to change. However, despite growing recommendations from bodies such as the British and Australian medical councils (the AMC and BMC) and the Liaison Committee on Medical Education (LCME) in North America, some medical schools remain to be convinced to adopt fully integrated curricula. This book aims to address this situation. It examines the nature of integration in learning, the history of the integrated medical curriculum, examples of integration practice and its benefits, and pitfalls to be avoided during implementation of an integrated curriculum. It then presents and analyses four detailed case studies of integrated courses or curricula. The Integrated Medical Curriculum is a key text for medical educators who wish to improve their curricula, their separate courses or even their individual teaching skills, as well as for curriculum specialists and practitioners.

Examination is as old as education itself. The examination process is the past phase of teaching and learning. Traditionally, the examination, has been a very tough exercise, fearful enough for students. However, with changing times, the procedure of conventional examination has changed. Now, the modern concept of examination is quite progressive and scientific. The educationists have introduced new terms like evaluation and measurement. Under evaluation, the level of knowledge and learning is weighted and under measurement, a learner is gauged and allotted score of marks.
