Peter Norton is a pioneering software developer and author. Norton's desktop for windows, utilities, backup, antivirus, and other utility programs are installed on millions of PCs worldwide. His inside the IBM PC and DOS guide have helped millions of people understand computers from the inside out. Peter Norton's introduction to computers incorporates features not found in other introductory programs. Among these are the following: Focus on the business-computing environment for the 1990s and beyond, avoiding the standard 'MIS approach.': A 'glass-box' rather than the typical 'black-box' view of computers-encouraging students to explore the computer from the inside out.

The fight for the future of the city street between pedestrians, street railways, and promoters of the automobile between 1915 and 1930. Before the advent of the automobile, users of city streets were diverse and included children at play and pedestrians at large. By 1930, most streets were primarily a motor thoroughfares where children did not belong and where pedestrians were condemned as “jaywalkers.” In *Fighting Traffic*, Peter Norton argues that to accommodate automobiles, the American city required not only a physical change but also a social one: before the city could be reconstructed for the sake of motorists, its streets had to be socially reconstructed as places where motorists belonged. It was not an evolution, he writes, but a bloody and sometimes violent revolution. Norton describes how street users struggled to define and redefine what streets were for. He examines developments in the crucial transitional years from the 1910s to the 1930s, uncovering a broad anti-automobile campaign that reviled motorists as “road hogs” or “speed demons” and cars as “juggernauts” or “death cars.” He considers the perspectives of all users—pedestrians, police (who had to become “traffic cops”), street railways, downtown businesses, traffic engineers (who often saw cars as the problem, not the solution), and automobile promoters. He finds that pedestrians and parents campaigned in moral terms, fighting for “justice.” Cities and downtown businesses tried to regulate traffic in the name of “efficiency.” Automotive interest groups, meanwhile, legitimized their claim to the streets by invoking “freedom”—a rhetorical stance of particular power in the United States. *Fighting Traffic* offers a new look at both the origins of the automotive city in America and how social groups shape technological change.

Explores the hardware, installation, configuration, and administration of computer networks using examples drawn from the Windows NT/2000, Unix/Linux, and NetWare environments Based on the pioneering New York Times series, *About Us* collects the personal essays and reflections that have transformed the national conversation around disability. Boldly claiming a space in which people with disabilities can be seen and heard as they are—not as others perceive them—*About Us* captures the voices of a community that has for too long been stereotyped and misrepresented. Speaking not only to those with disabilities, but also to their families, coworkers and support networks, the authors in *About Us* offer intimate stories of how they navigate a world not built for them. Since its 2016 debut, the popular New York Times’ “Disability” column has transformed the national dialogue around disability. Now, echoing the refrain of the disability rights movement, “Nothing about us without us,” this landmark collection gathers the most powerful essays from the series that speak to the fullness of human

experience—stories about first romance, childhood shame and isolation, segregation, professional ambition, child-bearing and parenting, aging and beyond. Reflecting on the fraught conversations around disability—from the friend who says “I don’t think of you as disabled,” to the father who scolds his child with attention differences, “Stop it stop it stop it what is wrong with you?”—the stories here reveal the range of responses, and the variety of consequences, to being labeled as “disabled” by the broader public. Here, a writer recounts her path through medical school as a wheelchair user—forging a unique bridge between patients with disabilities and their physicians. An acclaimed artist with spina bifida discusses her art practice as one that invites us to “stretch ourselves toward a world where all bodies are exquisite.” With these notes of triumph, these stories also offer honest portrayals of frustration over access to medical care, the burden of social stigma and the nearly constant need to self-advocate in the public realm. In its final sections, *About Us* turns to the questions of love, family and joy to show how it is possible to revel in life as a person with disabilities. Subverting the pervasive belief that disability results in relentless suffering and isolation, a quadriplegic writer reveals how she rediscovered intimacy without touch, and a mother with a chronic illness shares what her condition has taught her young children. With a foreword by Andrew Solomon and introductory comments by co-editors Peter Catapano and Rosemarie Garland-Thomson, *About Us* is a landmark publication of the disability movement for readers of all backgrounds, forms and abilities. Topics Include: Becoming Disabled • Mental Illness is not a Horror Show • Disability and the Right to Choose • Brain Injury and the Civil Right We Don’t Think • The Deaf Body in Public Space • The Everyday Anxiety of the Stutterer • I Use a Wheelchair. And Yes, I’m Your Doctor • A Symbol for “Nobody” That’s Really for Everybody • Flying While Blind • My \$1,000 Anxiety Attack • A Girlfriend of My Own • The Three-Legged Dog Who Carried Me • Passing My Disability On to My Children • I Have Diabetes. Am I to Blame? • Learning to Sing Again • A Disabled Life is a Life Worth Living

From one of our most acclaimed and original colonial historians, a groundbreaking book--the first to look at the critical "long year" of 1774 and the revolutionary change that took place from December 1773 to mid-April 1775, from the Boston Tea Party and the First Continental Congress to the Battles of Lexington and Concord. A WALL STREET JOURNAL BEST BOOK OF 2020 Mary Beth Norton keenly focuses on the sixteen months during which the traditional loyalists to King George III began their discordant "discussions" that led to their acceptance of the inevitability of war against the British Empire and to the clashes at Lexington and Concord in mid-April 1775. Drawing extensively on pamphlets, newspapers, and personal correspondence, Norton reconstructs colonial political discourse as it happened, showing the vigorous campaign mounted by conservatives criticizing congressional actions. But by then it was too late. In early 1775, governors throughout the colonies informed colonial officials in London that they were unable to thwart the increasing power of the committees and their allied provincial congresses. Although the Declaration of Independence would not be formally adopted until July 1776, Americans, even before the outbreak of war in April 1775, had in effect "declared independence" by obeying the decrees of their new provincial governments rather than colonial officials.

In *Autonorama: The Illusory Promise of High-Tech Driving*, historian Peter Norton argues that driverless cars cannot be the safe, sustainable, and inclusive "mobility solutions" that tech companies and automakers are promising us. The salesmanship behind the "driverless future" is distracting us from better ways to get around that we can implement now. Unlike autonomous vehicles, these alternatives are inexpensive, safe, sustainable, and inclusive. Norton takes the reader on an engaging ride--from the GM Futurama exhibit to "smart" highways and vehicles--to show how we are once again being sold car dependency in the guise of mobility. *Autonorama* is hopeful, advocating for wise, proven, humane mobility that we can invest in now, without waiting for technology that is forever just out of reach.

Norton presents a refutation of the conventional view that after the adoption of Christianity by the Romans the locals lost their voice in the appointment of bishops. He argues that this right remained for some time, with consequences for our understanding of the administration of the later empire.
