Developed by experts on schizophrenia and exhaustively reviewed by APA members, the "American Psychiatric Association Practice Guideline for the Treatment of Patients With Schizophrenia" provides therapists with a set of patient care strategies that will aid their clinical decision making. The guideline describes the best and most appropriate treatments available to patients with schizophrenia, including psychopharmacological treatments, ECT, and psychosocial and community interventions. It delineates the process of treatment planning and identifies areas in which research may improve our understanding and management of this condition. This guideline will also help managed care organizations develop more scientifically based and clinically sensitive criteria for the utilization and reimbursement of psychiatric services. Armed with these guidelines, clinicians can improve the care of their patients with schizophrenia and enable them to lead happier and more productive lives.

Remarkably, more than half of the world's population now lives in cities, and the numbers grow daily as people abandon rural areas. This fully updated and revised seventh edition of the classic text offers readers a comprehensive set of tools for understanding the urban landscape, and, by extension, the world's politics, cultures, and economies. Providing a sweeping overview of world urban geography, noted experts explore the eleven major global regions. Each regional chapter considers urban history, economy, culture, and environment, as well as urban spatial models and problems and prospects. Each begins with two facing pages: a regional map that shows the major cities and a table of basic statistical information about cities and urbanization in each region and a list of ten salient points about that region's urban experience. Chapters conclude with a list of references, including films and webpages, which can be used by the student and instructor for additional information about specific cities. This edition adds the important new themes of climate change and migration, while continuing to focus specifically on sustainability, water, technology, social and environmental justice, security and conflict, the history of urban settlement, urban planning trends, and daily life. Vignettes of key cities give the reader a vivid understanding of daily life and the "spirit of place." The opening chapter presents an overview of key terms and concepts and explores contemporary world urbanization, and a concluding chapter projects the world's urban future. Liberally illustrated in full color with a new selection of photographs, maps, and diagrams, the text also includes a rich array of textboxes to highlight key topics ranging from migration and immigration to LGBTQ activism, human security, and climate change. Clearly written and timely, *Cities of the World* will be invaluable for those teaching introductory or advanced classes on global cities, regional geography, the developing world, and urban studies.

From home, to school, to juvenile detention center, and back again. Follow the lives of fifty Latina girls living forty miles outside of Los Angeles, California, as they are inadvertently caught up in the school-to-prison pipeline. Their experiences in the connected programs between "El Valle" Juvenile Detention Center and "Legacy" Community School reveal the accelerated fusion of California schools and institutions of confinement. The girls participate in well-intentioned wraparound services designed to provide them with support at home, at school, and in the detention center. But these services may more closely resemble the phenomenon of wraparound incarceration, in which students, despite leaving the actual detention center, cannot escape the surveillance of formal detention, and are thereby slowly pushed away from traditional schooling and a productive life course.

Frame social problems, and identify solutions, through the lens of politics. Always controversial, and ever more polarizing in today's political climate, social problems take up a huge chunk of our cultural bandwidth. Rather than simply presenting social problems as a series of facts, the sixth edition of Social Problems focuses on how people construct problems, and how they develop potential solutions, based on their political attitudes. Analyzing issues from liberal, radical-left, conservative, and libertarian points of view, author John Macionis explains why people disagree about what the problems are, and how one person's "problem" may well be another's "solution." Once you understand how social problems are defined politically, you'll be able to develop your own positions, and you'll have the knowledge you need to engage in solving social problems through activism and political discussion

Recipient of a 2021 Most Promising New Textbook Award from the Textbook & Academic Authors Association (TAA) "Statistics with R is easily the most accessible and almost fun introduction to statistics and R that I have read. Even the most hesitant student is likely to embrace the material with this text." —David A.M. Peterson, Department of Political Science, Iowa State University Drawing on examples from across the social and behavioral sciences, Statistics with R: Solving Problems Using Real-World Data introduces foundational statistics concepts with beginner-friendly R programming in an exploration of the world's tricky problems faced by the "R Team" characters. Inspired by the programming group "R Ladies," the R Team works together to master the skills of statistical analysis and data visualization to untangle real-world, messy data using R. The storylines draw students into investigating contemporary issues such as marijuana legalization, voter registration, and the opioid epidemic, and lead them step-by-step through full-color illustrations of R statistics and interactive exercises. Empower your students to become part of the solution. The new Seventh Edition of Social Problems: Community, Policy, and Social Action by Anna Leon-Guerrero goes beyond the typical presentation of contemporary social problems and their consequences by emphasizing the importance and effectiveness of community involvement to achieve real solutions. With a clear and upbeat tone, this thought-provoking text challenges readers to see the social and structural forces that determine our social problems; to consider various policies and programs that attempt to address these problems; and to recognize and learn how they can be part of the solution to social problems in their own community. This book expands the sociological canon by introducing non-Western and female voices, and subjects the existing canon itself to critique. Including chapters on both the 'founding fathers' of sociology and neglected thinkers it highlights the biases of Eurocentrism and androcentrism, while also offering much-needed correctives to them. The authors challenge a dominant account of the development of sociological theory which would have us believe that it was only Western European and later North American white males in the nineteenth and early twentieth century who thought in a creative and systematic manner about the origins and nature of the emerging modernity of their time. This

integrated and contextualised account seeks to restructure the ways in which we theorise the emergence of the classical sociological canon. This book's global scope fills a significant lacuna and provides a unique teaching resource to students of classical sociological theory.

Pushing 'social' responsibilities on schools is a process that has been underway for a long time. This phenomenon has been studied more in Europe than in North America and the U.K. and has been labelled Pädagogisierung. The editors have chosen to use 'Educationalization' to identify the overall orientation or trend toward thinking about education as the focal point for addressing or solving larger human problems. The term describes these phenomena as a sub-process of the 'modernization' of society, but it also has negative connotations, such as increased dependence, patronization, and pampering. In this book distinguished philosophers and historians of education focus on 'educationalization' to expand its meaning through an engagement with educational theory. Topics discussed are the family and the child, the 'learning society', citizenship education, widening participation in higher education, progressive education, and schooling movements such as No Child Left Behind. 'Smeyers' and Depaepe's book offers great insights into one of the most ambivalent phenomena of today's educational world and especially educational policy. The contributions assembled represent perspectives of some of the most respected scholars in the field. Their manifold critiques of the educationalization of social problems are rather convincing. Our time is definitely ripe for such analysis!' Roland Reichenbach, Center for Educational Studies, University of Basel, Switzerland 'This is a challenging, critical and analytical treatment of the tendency of contemporary administrations to overburden educational institutions with the expectation that they will provide the solutions to an increasingly diverse range of social and economic problems. It brings together the theoretical resources of a distinguished international group of philosophers and historians of education and deserves the careful attention of educational policy makers, practitioners and researchers alike.' David Bridges, Von Hügel Institute, St Edmund's College, Cambridge, England This publication is realized by the Research Community (FWO-Vlaanderen / Research Foundation Flanders, Belgium) Philosophy and History of the Discipline of Education: Evaluation and Evolution of the Criteria for Educational Research.
